# ABOUT US

[Info@IranChemicalMine.com](mailto:Info@IranChemicalMine.com)

Iran Chemical Mine is a leading supplier and exporter of high-quality minerals and industrial chemicals, proudly rooted in Iran's rich geological heritage. With years of experience and a deep understanding of the global market, we provide a wide range of raw materials essential to industries such as agriculture, construction, ceramics, water treatment, oil & gas, and more.

Our mission is to connect the abundant mineral resources of Iran with businesses around the world by delivering consistent quality, competitive pricing, and reliable logistics. From natural zeolite, bentonite, and barite to industrial-grade chemicals like calcium carbonate and sodium sulfate, our portfolio reflects both diversity and quality.

We are committed to sustainability, ethical sourcing, and long-term partnerships. Our dedicated team ensures customer satisfaction through technical support, tailored solutions, and on-time delivery — making us a trusted name in the international minerals and chemicals market.

At Iran Chemical Mine, we don't just export products — we export trust, value, and excellence.

## Caustic Soda

A strong alkaline compound used in chemical manufacturing, water treatment, soap production, and various industrial cleaning applications.

## Calcium Chloride

Highly effective for de-icing, dust control, and moisture absorption; widely used in construction, food, and chemical industries.

## LABSA

A powerful surfactant mainly used in the production of detergents and cleaning products, offering excellent emulsifying and foaming properties.

## SLES (Texapone)

A common surfactant in shampoos, soaps, and liquid detergents known for its foaming, cleansing, and emulsifying properties.

## Soda Ash

Used in glass manufacturing, detergents, and pH regulation, it is a key component in various industrial and chemical processes.

## Ethylene Glycols (MEG, DEG, TEG)

Versatile glycols used in antifreeze, coolants, polyester production, and dehumidifying agents across many industries.

## Aluminium Sulfate

Used in water purification, paper sizing, and dyeing processes, offering excellent coagulating properties for various applications.

## Carbon Black

A fine black powder used as a pigment and reinforcing agent in rubber, plastics, inks, coatings, and automotive products.

## PAC

A highly efficient coagulant for water and wastewater treatment, delivering fast and effective clarification in various systems.

## Sodium Bicarbonate

Commonly used in food, pharmaceuticals, and cleaning products; acts as a leavening agent, pH buffer, and deodorizer.

## Ethyl Acetate

A fast-evaporating solvent with low toxicity, widely used in paints, coatings, adhesives, and printing inks.

## Methyl Acetate

A fast-drying, biodegradable solvent used in coatings, adhesives, and cleaning formulations due to its mild odor and effective solvency.

# Paraffin-based Products

## Liquid Paraffin

A clear, odorless oil used in cosmetics, pharmaceuticals, and food industries due to its purity, stability, and moisturizing properties.

## Paraffin Wax

Used in candle making, packaging, and cosmetics for its smooth texture, moldability, and moisture barrier qualities.

## Petroleum Jelly (Vaseline)

A semi-solid mixture used in skincare, pharmaceuticals, and personal care for its soothing, moisturizing, and protective effects.

## Slack Wax

A semi-refined wax used in rubber, matches, waterproofing, and as a raw material for further wax processing and refining.

## Fluorspar

Used in steelmaking, aluminum production, and chemical manufacturing as a flux to lower melting points and remove impurities.

## Calcium Carbonate

Widely used as a filler in plastics, paper, and paints; also utilized in construction and agriculture for pH balance and soil conditioning.

## Bentonite

A natural clay with high absorbency, used in drilling fluids, cat litter, binding agents, and environmental sealing applications.

## Clincker

The key ingredient in cement production, formed by sintering limestone and clay to produce strong, durable binding materials.

## [Zeolite](#)

A microporous mineral used in water softening, detergents, gas separation, and as a catalyst in petrochemical applications.

## [Salt](#) [\(Industrial, Food grade\)](#)

Essential for food processing, de-icing, water softening, and various chemical processes; available in refined and industrial grades.

## [Lime](#)

Used in construction, steel, environmental treatment, and chemical industries for pH control, neutralization, and soil stabilization.

## [Ferrosilicon](#)

An alloy used in steelmaking and foundry applications as a deoxidizer and alloying element to improve strength and quality.

# Bitumen Products

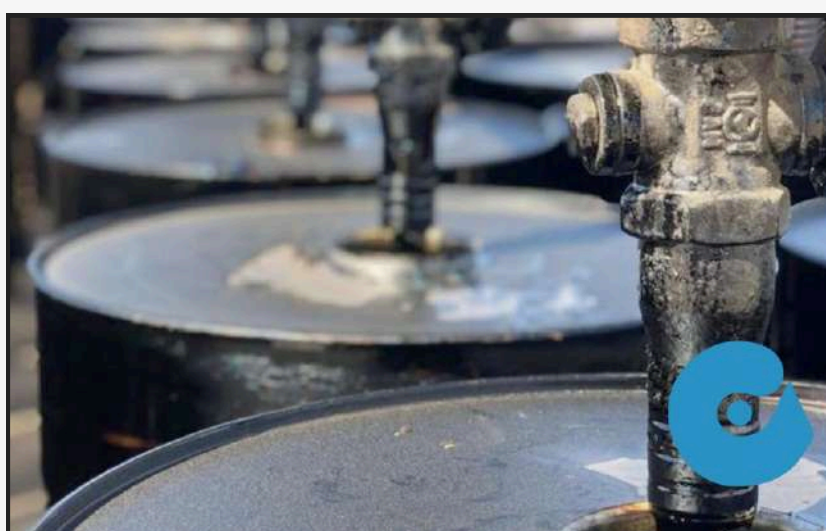

## Oxidized Bitumen

Modified bitumen used in roofing, waterproofing, and insulation due to its enhanced temperature resistance and durability.

## Penetration Bitumen

A refined bitumen grade used in road construction, paving, and asphalt mixes to provide strength, adhesion, and flexibility.

## Emulsion Bitumen

A water-based bitumen solution used for road maintenance and surface treatments, offering easy application and reduced emissions.

## Gilsonite

A natural asphalt resin used in drilling fluids, ink, paint, and foundry materials for its bonding, waterproofing, and hardening properties.
